

GERMAN SCHOOL

Appliance of science proves to be very happy experiment

PRESCHOOLERS at the German International School have been participating in a science-based pilot program.

The Little Scientists initiative gives youngsters an opportunity to develop a curiosity for science, maths and technology via hands-on experiments.

The program allows science to be a focus of the children's daily activities, and they are encouraged to do their own scientific research and ask questions.

Teachers at the Terrey Hills school use a variety of props, including activity cards and a trolley laden with household gadgets for the experiments

"Being part of the Little Scientists project has extended and enriched our preschool curriculum," head of preschool Silke Bethke said.

"The activity cards are helpful and easy to use.

"The children are keen researchers and enjoy the activities and the permanent science trolley."
